

14,000 organisations have put their trust in us for 14 years to back up their data. StoreIT is the core of our product line, our premium cloud-hosted backup solution. It allows you to create and store backups of your data on-site in our secure data centre and restore data to any point in time. Having multiple backups of critical data is vital for every organisation. It's the last line of defence against cyber threats, physical and natural disasters and any other form of data loss.

What we backup? And how?

- Full-image and file-level backup & recovery.
- On more than 20 platforms including Windows, devices, Apple devices, virtualized platforms & mobile devices.
- Protection from either an agent or host level.
- Backups are taken in either an incremental, encrypted or automated fashion.
- Backups are stored in the IronTree private cloud on immutable storage.

Why choose StoreIT?

- Watertight security:** Your data is encrypted and password protected BEFORE it's transmitted from the devices housing the data, this makes StoreIT an extremely secure and confidential solution.
- Fully customizable:** You can customize your own data backup schedule and what is backed up in it.
- Compatibility:** StoreIT works extremely well in tandem with ProtectIT, our premium cybersecurity solution.
- Fully managed:** From installation to monitoring to restoration assistance and even keeping track of hardware inventory, we do it all with you.
- Limitless restore time:** Unlimited restore point objectives (RPOs).

What the StoreIT solution offers:

- File backup
- Image backup
- Application aware backups
- Network share backups
- Vulnerability assessments
- Hardware inventory
- Group management of workloads

The StoreIT solution workload includes:

Backup

- Files/folders backup
- Full machine backup
- Disk/volume backup
- System state backup
