

IronTree is the leading Managed Service Provider (MSP) in the Middle East African region. We protect businesses using a modular stack of products that can scale to be your one-stop data guardian, providing world-class private hosting, protecting you from fraud, threats and hacks, ensuring privacy compliance, and eliminating costly downtime. Easy to integrate, we do not believe in long contracts, and have an industry-leading track record to prove it, winning the Acronis Cyberfit Partner Award across the MEA region at the end of 2021. In this environment, you need a partner that is faster than the risks, is proactive and communicative.

- ☁ 45+ client focused & client orientated personnel

## Testimonial

"We needed to find a universal back up solution. We went to IronTree who very quickly identified how to move our backups over. The central management of our stored product, gives us great flexibility in our backups and we found when dealing with issues we couldn't do ourselves, the support provided by IronTree has been fantastic. I have so much more time to do proactive work as opposed to maintaining and managing servers and software."

– **Steven Hardisty, IT Manager, M&G Investments**
