

HostIT is IronTree's premium private cloud hosting solution, which means that an organisation has its own private internal network, that is available to select users only, which makes it more secure. This solution is for organisations looking at hosting business-critical applications in a private cloud.

Simply put.

- We eliminate the need for a physical server.
- Enable secure access from anywhere in the world.
- It gives you the benefit of hosting your applications in a world-class datacentre.
- Plus, we offer the benefit of having a fixed and predictable billing model.

Why it matters?

Many businesses continue to face increased risk from sharing data in the cloud. With IronTree, we create and configure your own Virtual Private Server (VPS) which we can manage for you - protecting it with world-class cybersecurity, back up and disaster recovery.

Why invest?

-  **Cost saving:** HostIT requires no CAPEX investment in cloud infrastructure or onsite software & hardware. We manage and provide this for you.
-  **Secure:** We host your data in a world-class Tier 3 data centre facility and provide enterprise-grade cybersecurity with patch management.
-  **Stress-free:** HostIT is a fully managed virtual data centre meaning we do everything for you.
-  **No public access:** It is a private hosting facility with VPN connectivity.
-  **Dependable:** There are multiple backups run daily with full disaster recovery functionality.
-  **No sticker shock:** HostIT has a fixed and predictable billing model.
