

The complexity and frequency of cybersecurity threats continues to rise, and service providers and businesses are left counting on multiple point security solutions for protection. Organizations of all sizes need advanced security controls to combat today's cyber threats. But unfortunately, most EDR solutions capable of countering these threats and risks are too complex and costly to operate. Moreover, they require multiple point solutions for complete protection and businesses continuity.

You can now rely on a single platform for holistic endpoint security and business continuity.

Designed for service providers, **IronTree's** EDR enables you to simplify endpoint security — rapidly detect and remediate advanced attacks while ensuring unmatched business continuity. Eliminate the cost and complexity of multiple point products and enable your business with one complete cyber protection solution that is simple to manage and deploy.

How can it benefit your business?

IronTree EDR offers optimized attack prioritization and analysis for rapid response

- Streamline investigations with prioritization of potential incidents and reduced alert fatigue
- Unlock minutes-not-hours analysis at scale, with automated correlation and AI based guided attack interpretations
- Increase visibility to rapidly grasp attack analysis and impact, including how an attack got in, what harm it caused, and how it potentially spread

Integrated backup and recovery capabilities for unmatched business continuity

- Integrated backup and recovery capabilities, providing unmatched business continuity where point-security solutions fail
- Streamlined single-click remediation and recovery
- Complete, integrated protection across the NIST Cybersecurity Framework — Identify, Protect, Detect, Respond, and Recover — all from a single solution

Identify

- HW inventory
- Unprotected endpoint discovery

Protect

- Vulnerability assessments
- Exploit prevention
- Device control
- Security configuration

Detect

- Emerging threats feed
- Search for IOCs of emerging threats
- Anti-malware and anti-ransomware
- AI- and ML-based behavioral detection
- URL filtering

Respond

- Rapid incident analysis
- Workload remediation with isolation
- Forensic backups

Recover

- Rapid rollback of attacks
- One-click mass recovery
- Self-recovery

Complete cyber protection solution— in a single agent

-  Quickly and easily launch new services using a single agent and console — to deploy, manage and scale
-  Easily scale across multiple clients while and minimizing OpEx — no need for a large team of highly skilled people to operate

What are the benefits of EDR?

-  Incident prioritization and guided attack interpretations help users understand the attack scope in minutes
-  Integrated backup and recovery capabilities help provide business continuity
-  An easy to launch and scale service can right size to a business — no matter the size — with a single agent and platform
-  Improved compliance with an easy-to-deploy and easy-to-manage solution

Don't resort to multiple tools and advanced security expertise to protect endpoints. Simplify endpoint security with IronTree Endpoint Detection and Response (EDR).
