

Host your business critical servers and applications behind 7 layers of security

What is HostIT?

HostIT is a server hosted in a virtualised environment in the IronTree cloud. This cloud is accessible with Internet connectivity via your dedicated private network.

Gone are the days when you had to rely on legacy machines and server infrastructure stationed inside your own office. The global trend is to do away with these, so IronTree has responded by offering Virtual Private Server Hosting. We specialise in hosting business applications including SAGE Evolution, SAGE X3, SAGE 300 People, SAGE Pastel Partner, IQ Retail, SAGE VIP Payroll and the like.

IronTree HostIT Pricing

Starting from

R3000

per month (excl. VAT)

Base Components

- CPU's
- RAM
- Storage

Server Software Required

- Remote desktop users
- Remote printing licenses
- OpenVPN concurrent connections
- Windows Server 2022 OS

Protection Services

- Managed full system backups every 4 hours of the day
- Managed Patch Management.
- Proactive Server Monitoring
- Managed Patch Management.
- Ransomware and Anti-virus Protection
- Uncapped Internet Bandwidth

Six main benefits of a virtual private server (VPS) are:

- Easy configuration and management in terms of hardware resources.
- Simple and fast recovery from a disaster.
- Elimination of power issues, hardware failure and the possibility of theft since your server is hosted off your premises in a world-class, secure data centre.
- Easy access to your servers from multiple locations.
- Reliable, redundant hardware with dual power supply, fire-proofing, air-cooling, backup generators and Internet connectivity.
- Seamlessness:** A secure environment that has multiple layers of protection against malware attacks, i.e. a setup that's much more secure than a local server housed in a cabinet in your office.

IronTree's differentiating factors What's included with your server

Adaptive Defense

In order to be truly efficient, an endpoint protection solution should offer prevention, detection, visibility, and adaptive intelligence – before, during, and even after an attack takes place.

Adaptive Defense 360 – Anti-Virus and Anti-Ransomware Protection integrates all of these elements into a lightweight protection package for your server, supported by a large and scalable processing capacity in the cloud.

Panda Security Adaptive Defense 360 is the pinnacle of cyber security innovation. It's a security suite that integrates Endpoint Protection and Endpoint Detection and Response. It's a constantly updated managed service that protects your data from all known and unknown strains of malware, ransomware and cyber attack.

Built in Disaster Recovery

Included in your Virtual Private Server is full system backups which includes all of your applications and data on the server. We offer a flexible retention period with up-to 6 months of versions included by default

Low RPO and RTO

Your Virtual Private Server is backed up multiple times a day ensuring low Recovery Point Objectives with high speed Recovery Time Objectives using our industry leading Disaster Recovery solution.

File and database recoveries

Our Disaster Recovery solutions allows you to recover a single file or database back to your server, either replacing the original or to a new location.

Zero CAPEX

Requires no investment in cloud DR infrastructure or onsite software and hardware

Disaster Recovery management

Easily manage your backups and restores from our powerful cloud console.

Printing from a Virtual Private Server

Printing from your VPS is simple with IronTree. Even outdated dotmatrix printers can be adapted to print from our VPS environment using our software tool for printing. Also, your cash drawers for till points can be opened from our VPS environment.

A virtual private server on a private network

IronTree setup your server on a private network which is accessed via our dedicated VPN software, Either an agent based VPN or IPsec VPN connection. This ensures that your server is only accessible by authorised personnel and not visible to the public!

Manage your server, your way

IronTree's servers can be managed through our powerful web console which puts you in control. Not an IT expert? Leave it to IronTree to manage then!

Windows update management

IronTree will take care of your server while you take care of your business. Windows Update Management allows IronTree to update your server operating system with the latest security patches from microsoft, outside of your business hours so that your dedicated environment is always up to date and secure.

Server monitoring

IronTree will monitor your server resources to ensure your systems are always running optimally. This includes reporting and notifications for issues that need addressing.
