

The Growing Menace of Cyber Threats and the Importance of Cyber Security

IronTree presents an advanced cloud-hosted cyber security solution designed to stay one step ahead of the risk curve through proactive protection and regular updates. Our Cyber Security ensures that your organisation remains safeguarded against ransomware, malware, viruses, data breaches, and other digital threats, allowing your business to focus on what truly matters.

Why Should You Be Concerned?

The aftermath of a cyber breach or ransomware incident can be exponentially more damaging than the ransom itself. Reflect upon the potential fallout from a cyber event at your company:

- Loss of vital data requiring reconstruction
 - Subsequent revenue drops
 - Expensive infected hardware replacement
 - Reputational damage
 - System downtime
 - Penalties linked to insufficient cybersecurity policies
- Don't fall prey to the misconception that "it won't happen to me." Cybercriminals attack thousands of organisations daily, regardless of size or stature. We're all susceptible.

What is on offer with IronTree's Cyber Security?

IronTree's Cyber Security offering encompasses a comprehensive Managed Security Service Provider (MSSP), covering everything from backup to compliance and cyber security. Additionally, it enables insurers to manage the risk component of business insurance claims effectively.

Key elements of our solution include:

- Anti-malware and anti-ransomware protection
- Software inventory, drive health monitoring, and cyber scripting
- Patch management featuring fail-safe patching
- Safe Recovery to prevent malware reinfection
- Vulnerability Assessments
- URL filtering and categorisation

Navigate this era of cyber threats with confidence and expertise.
