

# A secure, connected and digital future.

IronTree offers a premium private cloud hosting solution, reserved exclusively for your organisation. Businesses requiring a secure environment for hosting their business-critical applications will find this private internal network, accessible only to chosen users, an ideal fit.

## Why Should You Care?

Risks linked to data sharing in the cloud persist for many organisations. IronTree Virtual Private Cloud (VPC) Hosting mitigates these concerns. We take the reins, creating and configuring your own VPC, strengthening it with elite cybersecurity, backup, and disaster recovery mechanisms.

### Six main benefits of a virtual private cloud

- Easy configuration and management in terms of hardware resources.
- Simple and fast recovery from a disaster.
- Elimination of power issues, hardware failure and the possibility of theft since your server is hosted off your premises in a world-class, secure data centre.
- Easy access to your servers from multiple locations.
- Reliable, redundant hardware with dual power supply, fire-proofing, air-cooling, backup generators and Internet connectivity.
- A secure environment that has multiple layers of protection against malware attacks, i.e. a setup that's much more secure than a local server housed in a cabinet in your office.

## Why Should You Invest?

Our hosting solution is a server hosted in a virtualised environment in our cloud, and accessible with internet connectivity via your dedicated private network. Gone are the days when you had to rely on legacy machines and server infrastructure stationed inside your own office. The global trend is to do away with these, so IronTree has responded by offering Virtual Private Cloud Hosting. We specialise in hosting business applications including SAGE Evolution, SAGE X3, SAGE 300 People, SAGE Pastel Partner, IQ Retail, SAGE VIP Payroll and the likes.

<h3>Economies of Scale</h3> <p>Our hosting eliminates the need for a CAPEX outlay on cloud infrastructure or on-site equipment. IronTree manages it all on your behalf.</p>	<h3>Ease of Use</h3> <p>As an end-to-end managed virtual data centre, our hosting drastically simplifies your operations, with IronTree handling every detail.</p>
<h3>Dependability</h3> <p>It offers peace of mind with the assurance of multiple daily backups underpinned by robust disaster recovery functionality.</p>	<h3>Security</h3> <p>Your data is hosted in a world-class Tier 3 data centre, complemented with superior cybersecurity measures and thorough patch management.</p>
<h3>Privacy</h3> <p>IronTree Hosting provides an unaffected hosting solution with VPN access, ensuring your digital environment remains private.</p>	<h3>Predictability</h3> <p>No unexpected costs. Enjoy a predictable and fixed billing model, keeping your finances transparent.</p>
<h3>Put Simply</h3> <p>With IronTree's VPC Hosting, your organisation skips the need for a physical server yet gains access from anywhere globally to a world-class data centre. Additionally, pricing predictability enhances financial management.</p>
