

Extended Detection and Response (XDR)

As cyberattacks become increasingly sophisticated, relying on endpoint protection alone can leave your company vulnerable to an attack. Standard endpoint protection solutions might provide a single layer of defence, but come with a host of other problems.

Why does your business need XDR?

Insufficient levels of protection, leaving other attack surfaces vulnerable. High levels of complexity. Incomplete protection plans. High costs. IronTree's Extended Detection and Response (XDR) solution offers the most complete security solution for your business. With this XDR solution your business will get complete, natively integrated protection built to swiftly prevent, detect, analyse, respond to and recover from incidents across your most vulnerable attack surfaces. XDR is essential to counter advanced cyberattacks across diverse IT environments such as endpoints, email, identity, and Microsoft 365 environments.

Expand your protection and visibility across endpoints and your most vulnerable attack surfaces

XDR enables you to gain valuable insight into attacks and can increase response actions.

Detect and block advanced cyberattacks before a breach

XDR monitors events across endpoint devices, email, identity, and Microsoft 365 environments.

Swiftly respond to threats before the damage is done

Our XDR has pre-integrated recovery, ensuring business continuity.

Satisfy your compliance needs and protect sensitive data

Our XDR solution protects you against data loss, unauthorised access and transfer of sensitive data, helping you maintain compliance and satisfy industry regulations.

Ease of management

Having multiple solutions can be costly and time consuming. Using IronTree's XDR is safer and simpler for your management team.

Faster incident investigations

With our XDR, you can leverage AI-prioritised incident lists to ensure legitimate incidents are addressed.

Ensure business continuity amid attacks

IronTree's XDR ensures business continuity and protects against data loss.

Key differentiators of IronTree's XDR Solution:

- **AI-based, easy-to-understand interpretation of the attack chain:** Effortlessly analyse attacks with narrated incidents that are easy to interpret.
- **Response that integrates remediation and recovery**
- **Consolidation with a single platform and agent:** Cost efficiency. Streamlined management. Scalability.

Move beyond the costly strategy of deploying multiple cyberthreat tools.

Modernise your cybersecurity with IronTree's XDR and achieve unmatched business continuity with speed and ease. Contact us for a free consultation or schedule a demo now.
